FY26: July 1, 2025 - June 30, 2026

Annual Report

Southern Maryland RC&D Board, Inc.

Small but Significant

The RC&D Staff and Board dedicated several board meetings to revisiting our strategic plan for the 3-yr midpoint. We worked together in small groups to identify emerging concerns in the Southern Maryland region and our most pressing issues for RC&D. These sessions allowed us to combine our expertise and fully explore our vision for RC&D's future. We will be ready and able to tackle the next two years with clear objectives to reach our new goals!

Funding Highlights

We were awarded several grants through federal, state, and local funding programs to complete restoration and resilience actions across the Southern Maryland region and beyond. **Our total awarded contract dollars at the end of this fiscal year exceeded $18 million**. Approximately $6.7 million is currently unexpended of which $5.5 million will be passed to qualified contractors procured by RC&D.

The Finance Committee continues to meet quarterly to discuss our financial strategy and investment portfolio. We recently conducted a review of our investment policy and voted to keep it in effect with no changes for another three years. Our investment account is currently valued at just over $400 thousand. Our portfolio continues to perform well and we are looking for additional ways to diversify our funding sources. With guidance from our Financial Advisor, we are researching donation and gift acceptance options for private donations such as an endowment or donor advised funds.

RC&D received $7,430 in unrestricted donations and support from community stakeholders and partners.

Vision

People and the environment in harmony in Southern Maryland.

Guiding Principles

Healthy Ecosystems, Healthy Enterprises, and Healthy Communities

Mission

Working in partnership with community groups and organizations, Southern Maryland RC&D is dedicated to improving the quality of life in the region by enabling the people and promoting the wise use of our natural and economic resources.

Goals

NEW

1. Increase RC&D presence.
2. Diversify funding strategy.
3. Become better advocates, especially for producers.
4. Promote Southern Maryland products and experiences.
5. Improve and/or increase access to green spaces.

Activities

Our Projects: Tree Planting & Maintenance for the 5 Million Trees Initiative

RC&D signed another contract with the Maryland Forest Service to help plant trees and provide maintenance for their 5 Million Trees Initiative at three sites: Greenwell State Park and Newtowne State Park in St. Mary's County, and Chapel Point State Park in Charles County. A total of 37,605 native shrubs and saplings were planted across 86.36 acres, and even more maintained! We will be eligible to assist with SOMD projects through our MOU with the Forest Service until 2030.

Our Projects: NAS Patuxent River Shoreline Restoration & Monitoring

This project specifically addresses the stabilization and restoration of 4,870 LF of shoreline, which consists of six sub-reaches. RC&D, contracted with Coastline Design, P.C., Coastal Design & Construction, Inc., and St. Mary's Soil Conservation District to complete the Hog Point Living Shoreline and Coastal Resiliency Project. This project protects shoreline critical to regional climate resiliency, the Navy's military mission, and nesting habitat for many Northern Diamondback Terrapins. Funding sources included a grant from the National Fish and Wildlife Foundation, a REPI Challenge Grant, and funding from the US Navy.

An ongoing terrapin nesting behavior study allows us to look at the effect of shoreline restoration on the terrapins. With the passing of Dr. Chris Rowe on March 4th 2026, former RC&D employee Jessica McGlinsey picked up portions of the study as part of her Conservation PhD program.

The project continues to perform well in its second year. Terrapins are reaching the new protected beaches in record numbers. Grasses have taken hold and are spreading, creating habitat and important food sources for hatchlings. Additionally, the placement of the windows (openings in the rock sills) has diverted most terrapin nesting activity away from the military training site, which could allow the military to use it without any blackout times during the next nesting season. Teams will continue to study the interaction between the terrapins and the living shoreline project. RC&D will be monitoring the restoration for the next 3 years.

Activities

Our Projects: Johnson Pond Dam Breach

The dam was safely breached and the area was stabilized. Underwood & Associates was able to design a breach that maintained the wetland and pond behind the former dam. Another design that includes fish passage and naturalization of the site was submitted for County approval. The project is fully complete and performing well. No negative upstream or downstream impacts were indicated. RC&D has finished inspecting the project.

The site has been populated by many native species of grasses, wildflowers, shrubs, and trees that were not planted for stabilization alongside those that were planted. The downstream population of Eastern elliptio mussels continues to thrive, further filtering the St. Mary's River water as it flows towards the Chesapeake Bay.

Our Projects: Piney Point Shoreline

The Piney Point Living Shoreline project was completed in April of 2026. RC&D is working with Coastline Design P.C. to provide the County with construction inspection services and to monitor the performance of the project over at least the next 3 years. DNR is paying special attention to downstream impacts.

Our Projects: Greenwell State Park Conservation & Restoration

Maryland Park Service, with help from RC&D and EcoHaven LLC is implementing all parts of the Restoration Plan that was written for Greenwell State Park in July of 2024 (also through RC&D with EcoHaven LLC). The Plan includes 3.1ac of reforestation, 8.5ac of meadow creation, and 0.92ac of invasive bamboo removal plus three years of maintenance. These restoration activities account for an estimated reduction in total suspended solids of 9,384.56lbs. This project is 100% grant-funded through DNR's Climate and Watershed Services.

EcoHaven LLC has finished all of the site preparation. The first growing season went well and provided insight for the follow-on maintenance. Additional grass-specific herbicide treatments are planned for next season. The reforestation is complete and weed suppression treatments have begun. The invasive bamboo near the water's edge was hand cut and treated with herbicide. The cleared site finally allows visitors to see a beautiful view of the Patuxent River!

Activities

Our Projects: St. Inigoes Landing Boat Ramp & Pier Repair

St. Mary's County Recreation & Parks hired a contractor to implement the permitted plans developed by RC&D. We were not retained for construction inspection or monitoring services but did visit the site in March of 2026 at the beginning of construction. The project was moving forward and the contractor was happy to have Coastline Design P.C. and RC&D available to discuss the plans and site conditions. RC&D's role in this project has been fulfilled.

Our Projects: NRCS Technical Support Cooperative Agreement

RC&D continues to recruit, hire, and conduct employment and benefit administration for Affiliates. The Affiliates assist NRCS offices with program implementation in Southern Maryland and the Eastern Shore Maryland. All current positions are full-year, full-time. Our agreement has not officially been extended, but we are hopeful the contract will continue beyond the current end date of January 2027. We currently support 19 NRCS Affiliate employees, both field and office positions. RC&D Affiliates have been working hard to fulfill the mission of NRCS to keep "working lands in working hands" and provide support to Maryland producers wishing to better protect our natural resources. Feel free to read about our Affiliate employees in the Staff section of our website (www.somdrcd.org).

Our Projects: Broom Creek Gully Stabilization and SMCM Curriculum

With funding provided by the Chesapeake Bay Trust and Maryland DNR, RC&D has partnered with Underwood & Associates and St. Mary's College of Maryland (SMCM) to develop an Ecological Restoration curriculum that will incorporate real-world local restoration projects into coursework for SMCM Environmental Studies students.

The first project selected was a stormwater gully stabilization. The initial plans for the gully stabilization included the neighboring property, but the owner was adamantly against any work being performed on their land. Another location that omits work on the adjacent property was approved and the redesign is ongoing. Unfortunately, the size of the ecological restoration has been decreased so cost effectiveness of the new design may make it unlikely to receive implementation funding.

RC&D has identified additional stream restoration sites near the college that could be ideal locations for continued development of the SMCM ecological restoration curriculum while also providing needed water quality benefits to the County. Sites will be used as "living labs" for students to conduct baseline assessments and future monitoring of the environmental response to the projects.

Activities

Project Summary & Plans for the Future

RC&D completed nearly **$2 million** in restoration projects in FY26 and provided more than **$1 million** in technical assistance. Only about $110 thousand was funding from contract awards with the remaining dollars provided through grants that RC&D helped secure and manage for our partners. Grant funds are a critical benefit for our resource-limited rural area. RC&D continues to prioritize working with local firms, when possible, to further support our regional economy.

A majority of our major construction projects that spent FY25 waiting for permits had been fully completed by the close of FY26. RC&D will be monitoring some of those projects for the next few years (see above for details). RC&D focused on providing technical assistance, coalition-building, and strengthening existing partnerships in FY26. These activities will result in more long-standing project identification frameworks that will focus water quality improvements on specific watersheds and be able to fuel future RC&D projects for years to come. Thus far we have established two new coalitions and will be able to share more details on the next Annual Report!

Our NRCS Cooperative Agreement to provide Affiliate employees to the Eastern Shore and Southern Maryland continues to be a great asset to RC&D and the USDA, providing necessary support at a high level of quality. We hope to continue working closely with USDA/NRCS to provide qualified employees and to expand our involvement by promoting and assisting more directly with installing best management practices and conserving agricultural lands throughout the region.

Our Partners

We have worked with numerous partners on projects throughout Southern Maryland and beyond. Our partners provide us with funding, skills, knowledge, and technical expertise to get the job done as well as connect us with more of our community members. What we have accomplished would not be possible without our amazing Partners! We hope to continue to invest in relationships across Southern Maryland. If you would like to partner with us, or know of an organization you feel would be a good fit, please reach out and let us know!

Activities

Environmental Education & Stewardship Efforts

- Staff again joined other Southern Maryland Conservation Alliance members in conducting a Water Quality Blitz, sampling water from 3 streams in St. Mary's County. This year marked the 9th annual Blitz. RC&D has been participating since 2023.

- RC&D partners and staff (past and present) spent a day cleaning up the Hog Point shoreline, as well as providing some much-needed project maintenance after a very tough winter buried or destroyed a lot of the goose fencing installed around the plants. We scheduled the cleanup for April so that we could prepare the beach for the arrival of the nesting terrapins, ensuring no fencing or trash would inhibit access.

- Marti attended the College of Southern Maryland Nonprofit Institute’s annual conference.

- Staff continues to share information about local environmental topics, available natural resource job and training opportunities, and upcoming events through their social media accounts and website.

- Allison attended an America 250 celebration of the signing of the Declaration of Independence at the Thomas Stone National Historic Site. The program included the unveiling of Charles County’s Liberty Tree, a keynote address from Senator Chris VanHollen, and the official release of the draft master plan for the Southern Maryland National Heritage Area.

- Our free virtual Winter Seminar Series featured guest speakers who shared information on native plants for wildlife, barn owls, eastern box turtles, the importance of tree canopy, and corals.

- EcoSchool started up again this year, featuring topics such as native plants, Maryland forests, soil health and conservation, and wetlands. The program also included a guest speaker to help engage and reach local homeschool families.

MIDDLE CHESAPEAKE SENTINEL LANDSCAPE

Celebrating Milestones with the Middle Chesapeake Sentinel Landscape

Holly Drury (NAWCAD Range Sustainability Office) PRESS RELEASE

Naval Air Station Patuxent River (NAS Pax River), the Atlantic Test Range (ATR), and Middle Chesapeake Sentinel Landscape (MCSL) along with leadership, partners, and stakeholders came together at the Patuxent River Naval Air Museum in Lexington Park, Maryland June 3, 2026 to celebrate dual milestones in Fiscal Year 2026; the 10th anniversary of the MCSL and surpassing 20,000 acres protected through the Department of War (DoW) Readiness and Environmental Protection Integration (REPI) program beneath NAS Pax River / ATR airspace.

The NAS Pax River and ATR REPI program has successfully preserved 108 parcels beneath the Navy airspace since 2010, protecting 21,005 acres across portions of three distinct geographies; Southern Maryland, the Northern Neck of Virginia, and Maryland's Eastern Shore and southwest Delaware.

Celebrating its 10th anniversary in FY26, the MCSL continues to build and facilitate collaborative, multi-stakeholder partnerships that advance shared goals supporting military readiness, working and natural lands, and resilient communities and ecosystems. Together with the Navy, MCSL partners have doubled the average annual rate of land protection through the NAS Pax River and ATR REPI program, successfully leveraging REPI funding such that for every REPI dollar spent, seven were brought in from other sources, including state, local, and private funds.

The MCSL is one of 21 Sentinel Landscapes operating across the country, all supported by the broader Sentinel Landscape partnership. Founded in 2013, the Sentinel Landscape partnership aligns the objectives of the U.S. Department of Agriculture (USDA), DoW, and Department of the Interior to strengthen military readiness, conserve natural resources, bolster agricultural and forestry economies, increase public access to outdoor recreation, and enhance landscape resilience. By creating coalitions of federal agencies, state and local governments, and private organizations, sentinel landscapes are able to strategically and efficiently leverage resources to implement conservation projects that safeguard military, working lands, and recreation interests.

Following an on-installation tour of VX-1 (Air Test and Evaluation Squadron One) and the Hog Point project site, the day culminated in a visit to a preserved farm in Southern Maryland. The 80-acre property, owned by Roberta and John Sola of St. Mary's County, showcased the tangible benefits of these conservation efforts.

Together, the organizations recognized the partnership, collaboration, and shared values that have contributed to their collective progress in preserving the working and rural character of key landscapes vital to military testing and training.

CLIMATE RESILIENCE NETWORK
SCIENTISTS SERVING COMMUNITIES

Scientists Serving Communities Workshop 2026

"Workshop Final Report Executive Summary" - UMD Climate Resilience Network

Building on the success of the previous two workshops held in January 2024 and 2025, Scientists Serving Communities (SSC2026) was held at the Adele H. Stamp Student Union on the campus of the University of Maryland, College Park on January 20 and 21, 2026. Over two hundred people were in attendance, including representation from University of Maryland system departments and centers, federal and state agencies, local and county governments, non-profit organizations, and private industry. SSC2026 was hosted by the Climate Resilience Network (CRN) which is led by the Earth System Science Interdisciplinary Center (ESSIC), a research center within the College of Computer, Mathematical and Natural Sciences (CMNS). The organizers are planning to hold another workshop in 2027.

The workshop was structured to have a mixture of keynote speakers and panel discussions on key environmental and climate-related topics relevant to Maryland communities, including fresh and saltwater flooding, agriculture and air and water quality. An afternoon reception and poster session featuring student work was also held. This structure allowed for ample opportunities for the participants to interact with the panelists and attendees. Opening remarks were given by Patrick O'Shea, Vice President of Research, and Amitabh Varshney, Dean of CMNS. Lars Peter Riishojgaard, Director of ESSIC, introduced ESSIC. William Ball, Professor Emeritus at Johns Hopkins University, introduced the keynote speaker, Kristen Saunders, Director of the Center for Watershed and Bay Resilience at the Maryland Department of Natural Resources.

On the second day, a team from the University of Maryland's Office of Government Relations (Christine Hagan, Jazz Lewis and Gloria Aparicio Blackwell) presented federal, state and county level discussions on budget process, funding prospects and opportunities that the CRN may be able to pursue.

The panel discussions provided opportunities for interaction between the audience, the panelists and the moderators. Some of the key findings from the workshop, as capturedby the moderators, include:

- The data collected by the CRN (Hydronet, Mesonet, air and water quality) are of tremendous value but are not currently routinely accessible to stakeholders in a directly usable form.
- There is a need for quantitative prediction/projection information at time scales ranging all the way from minutes (e.g., for flash floods) to decades (e.g., for zoning, building codes, and for insurance and mortgage industries).
- Most users require integrated Earth system data products at high spatial resolutions, matching the spatial scales at which their decisions are made.
- Several panels expressed the desire to see analysis of economic impact and trade-offs of different options for adaptation action to support decision making.
- CRN should develop new application areas for some of its data, e.g., prediction of power outages due to falling trees, management of wastewater treatment plants,etc.
- Communication and building trust is key to the success of the CRN; the network needs to meet the recipients of data and information on their home turf.

Announcements

Partnership Updates

Middle Chesapeake Sentinel Landscape Partnership (MCSL)
RC&D projects were prominently featured at the MCSL 10yr and 20,000ac celebration event (see events). Staff were in attendance, as well as Board President Pat Pinnell. RC&D answered questions and presented while attendees toured the Hog Point shoreline project and a conserved property near the base. We continue to work closely with the MCSL to provide technical support on grant applications and project management throughout the region. RC&D, with help from MCSL partners, submitted another REPI Challenge proposal for a shoreline project that protects critical military infrastructure along the Chesapeake Bay.

Southern Maryland Conservation Alliance (SMCA)
SMCA contracted with GreenFin Studios through a grant from the Chesapeake Bay Trust and Constellation Energy to create a regional communications and marketing strategy to improve land conservation and outreach in the region. The marketing kit included a new logo, case studies, short videos, photos, and suggested language for all partners to use in their outreach and engagement with the public. Our Board member, Jason Leavitt's family farm was one of the case studies featured! We are building from this momentum and using our new marketing strategy to develop coordinated regional events for fundraising and outreach.

Chesapeake Gateways Network and Potomac Heritage National Scenic Trail (PHNT)
RC&D applied to become a Chesapeake Gateways Network partner, which opens up new funding opportunities for us to continue protecting and enhancing Southern Maryland's natural and cultural heritage.

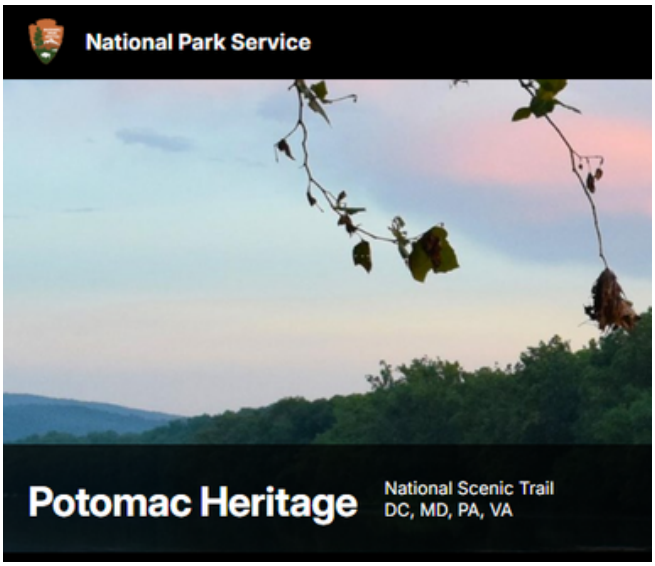

SOMD Meadows & Grasslands Initaitive or The Patuxent Habitat Collaborative
Partners from PG SCD, Quails Forever, PG Parks, and Maryland Extension service completed guidance for landowners wishing to manage their properties for grassland species. Some landowners in Charles County were managing their land accroding to the guidelines with great results!

Call to Action

Become a Citizen Scientist!

We recently established the **Southern Maryland Community Science Collaborative** which consists of multiple organizations (within the 5th congressional district) that are leading citizen/community science programs.

The group meets monthly to exchange ideas and information, assess the state of community science in Southern Maryland, and discuss potential areas for improvement and/or expansion.

If you are interested in participating or know of an organization that contributes to community science in southern Maryland, feel free to reach out to Allison or Marti!

Keep an eye out on our social media for ways you can volunteer with our partners on citizen science projects!

Awards & Recognitions

We Are Incredibly Grateful to Our Donors for Investing in Our Mission and Vision!

- **Chesapeake Level -** Cole's Family Foundation
- **Potomac Level -** Herbert & Naomi Leavitt Family Charitable Trust

thanks for your support

Any amount helps!
We greatly appreciate your support!!

Board & Staff

Incoming and Outgoing Board Members

Eric Valentine joins us as a SOMDRCD Sponsor Appointed Member-Charles County. We're excited to have him!

Eric Valentine

Join Us!

If you or someone you know has experience with fundraising, event planning, or marketing please consider serving on our Board or help us establish a new Committee! We are always looking for fresh perspectives and new ideas to help RC&D better serve Southern Maryland.

If you are interested in serving on our Board, please email somdrcd@somdrcd.org or call 240-577-6413 for more details on how to apply.

Tommy Wright was an RC&D board member for almost 17 years. He was active and a big help with the shoreline projects we worked on. His knowledge will be missed.

Thank you

Patrick Woodburn was a board member for 4 years. He was always willing to participate when he could.

Tommy Wright

We thank them both for their years of dedicated service to the SOMDRCD organization and wish them well.

Patrick Woodburn

Board & Staff

Executive Director Letter

Hello Partners, Board Members, and Friends,

This year flew by! It felt like most of my time was focused on planning, reporting, managing project documents and deliverables, tracking budgets, and performing other office tasks as we were wrapping up some of our larger construction projects. I was thankfully able to spend at least some of my time out of the office and in the field, working directly on site and speaking with community members and partners.

I am working on some big ideas that should be really beneficial for our region's economic and environmental resilience. I am excited about what the next year will bring as I finalize some of these partnerships and work out the details for speeding up conservation and restoration efforts across Southern Maryland that align with regional priorities.

The funding landscape is still challenging. With federal budget uncertainties and a large Maryland State budget deficit, conservation is the first piece to get cut from government spending. RC&D will keep researching and adopting new ways to diversify our portfolio to insulate our future from governmental shifts.

RC&D is a healthy organization. The Board and Staff will continue to discuss whether additional growth for our organization is desirable and possible with our current staffing and funding levels. RC&D's future continues to look bright! Thanks so much to all our partners and supporters who helped us identify and complete projects.

A special thank you to all our Board Members who provide valuable oversight and expertise. You all worked extra hard this year during our strategic plan midpoint sessions. We have an excellent blueprint for the next couple of years! Thank you for your time and continued engagement with RC&D in achieving its mission and vision for Southern Maryland.

Allison Burnett, Executive Director

Board & Staff

Land Conservation Report

FY26 was another busy year in Land Conservation, as we continued to process 15 properties between Calvert, Charles, and St. Mary's counties.

We settled two properties in the Mattapany region, and one in Calvert, bringing our total easements held in Calvert and St. Mary's to 35. We are continuing to assist Charles County with their Rural Legacy Easements; we settled one property, and are wrapping up five more!

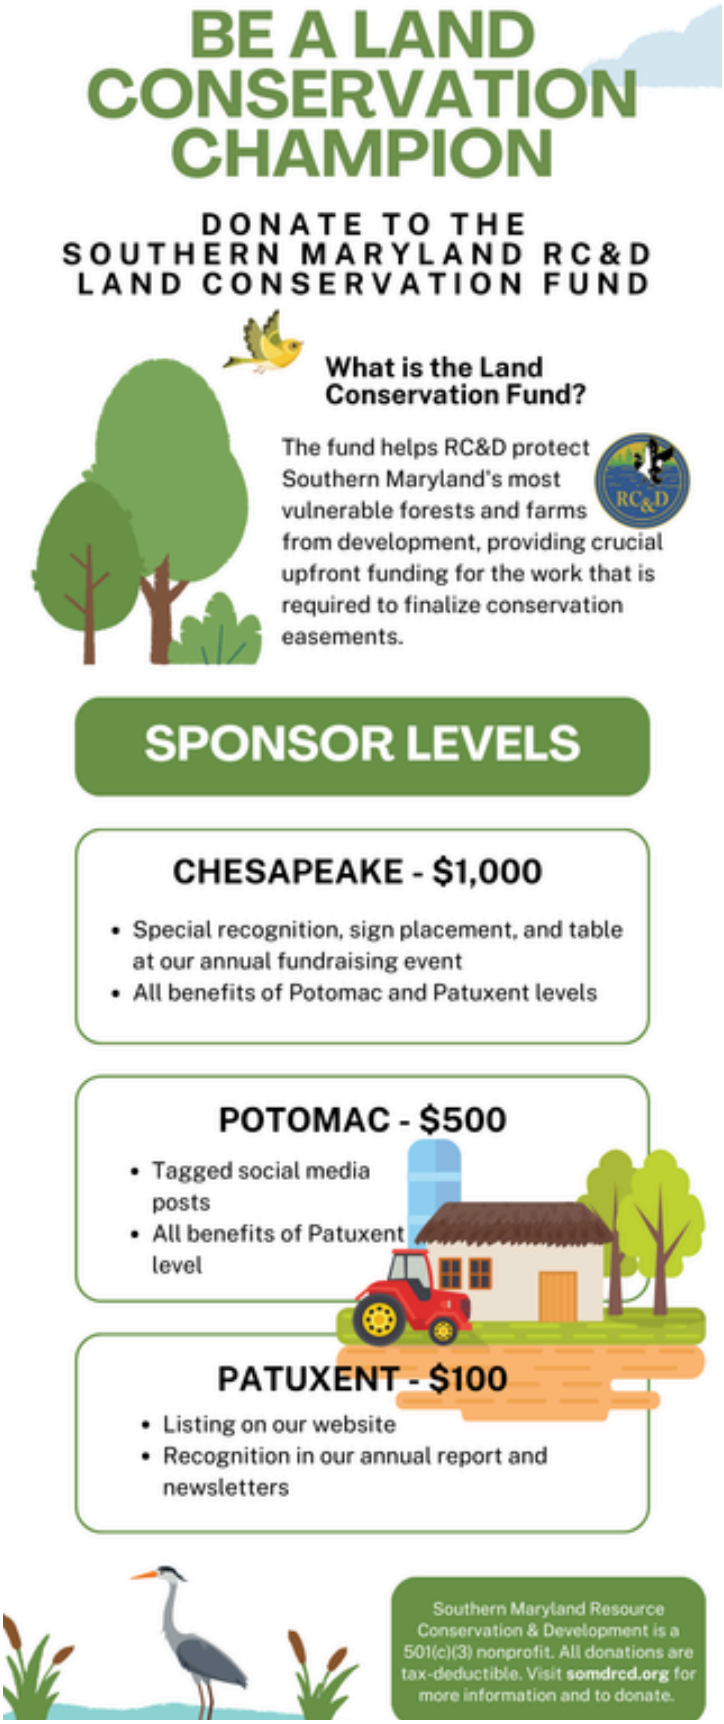

Landowner interest in conservation remains strong, and we continue to recieve inquries from landowners. While demand remains high, the funding landscape is evolving, and we are closely monitoring changes to state conservation programs and legislation that may affect future easement opportunites.

As we work through the remaining properties with secured funding, we will explore additional conservation strategies and funding partnerships to ensure we can continue serving landowners.

We will remain committed to helping landowners navigate these changes and look forward to another year of conservation.

Jessy Cockrell,
Land Conservation Program Director

Board & Staff

Staff Messages

During my second year as the Land Conservation Program Assistant with Southern Maryland RC&D, I continued to monitor perpetually protected conservation properties to help ensure compliance with easement requirements and support long-term land stewardship efforts. In addition to my conservation responsibilities, I expanded community outreach and environmental education initiatives.

I successfully coordinated and completed the Winter Seminar Series, providing educational opportunities for community members on natural resource and conservation topics. I also brought back the EcoSchool program, helping to foster environmental awareness and stewardship among students. Social media outreach continued to grow throughout the year, increasing our audience to approximately 954 followers toward our goal of 1,000.

I represented Southern Maryland RC&D at several community events, including the Agricultural Resource Fair and the MCSL Celebration, where I promoted our conservation programs and engaged with local residents and partners. Fieldwork remained an important part of my role, including participation in multiple eastern box turtle surveys and the regional Water Quality Blitz, contributing to local conservation and environmental monitoring efforts.

Overall, this year provided opportunities to strengthen land conservation efforts, expand environmental education programming, increase community engagement, and contribute to field-based conservation initiatives across Southern Maryland.

Marti Bagwell, Land Conservation Program Assistant

After 34 great years with Southern Maryland RC&D, I continue to enjoy my work, the people I work with and the many amazing projects we have completed and continue to work on. We are finding new projects often and I am learning new things and meeting new people. I have assisted on a shoreline clean up on the Pax River Naval Base with staff. I continue to assist the staff and Board with anything they need. I look forward to another productive and successful year with Southern Maryland RC&D.

Denitra Brawner, Administrative Associate

Come be a part of a great organization!!

Southern Maryland RC&D is looking to fill vacancies on our Board. We currently have vacancies for members appointed by/representing the following:

- Anne Arundel Forest Conservancy Board
- Charles Forest Conservancy Board
- Prince George's Forest Conservancy Board
- Anne Arundel County Government
- Prince George's County Government

RC&D prefers that you reside in the county you wish to represent. Members serve on the board for three years.

We also have Board Appointee positions open for Anne Arundel, Calvert, Charles, Prince George's & St. Mary's counties.
